Let's keep it positive, smart & human.

Digitalization is happening all around us. to improve lives.

Nope, not to develop cool technology: never forgetting why we're here. We watch & listen, then identify & act, to digital policy & beyond. that strengthens & guides the country's A collaborative government initiative

Yotako

Web & mobile app development just got a whole lot faster with Yotako, a platform that lets design teams turn their designs into code with a couple of clicks. Developers simply upload their design files (e.g. Adobe Photoshop or XD, Sketch, Balsamiq) & the technology extracts the knowledge embedded in the files. After selecting their stacks, users are left with ready-to-use code for their application & can even test the code via a preview feature.

SafeLive's advanced profiling & anomaly detection solutions support caretakers in the critical task of watching over the elderly. The SaaS tool turns off-the-shelf wearable devices (e.g. smart watches) into reliable monitoring tools that measure motion, heartbeat, sound, location & more. Individuals with aging loved ones & professionals responsible for the care of vulnerable seniors receive automatic alerts via their smartphones in the case of anomalies in behavioral patterns.

- Wizata -

“Enabling the industry to swiftly embrace the power of artificial intelligence in partnership with & make data-driven decisions is the essence of our company.”

By analyzing billions of online texts – news articles, social media messages, blogs & forums – SESAMm identifies emotional trends to predict financial market movements. Its solution is a snapshot of local innovators using artificial intelligence to enhance industries.

Many metal manufacturing companies know that there are modern AI tools out there that could help them boost output, reliability or quality. However, allocating resources, launching R&D & industrializing those solutions across all business lines remains a massive undertaking. With Wizata’s AI platform, they can identify & integrate a tailored artificial intelligence solution while staying in control of every step. By optimizing their metal production processes, Wizata gives them the power to turn points of friction into sources of revenue.

AI is here.

a snapshot of local innovators using artificial intelligence to enhance industries.

digital luxembourg

A collaborative government initiative that strengthens & guides the country’s digital efforts – from ICT Infrastructure to digital policy & beyond.

We watch & listen, then identify & act, never forgetting why we’re here. Nope, not to develop cool technology: to improve lives.

Digitalization is happening all around us. Let’s keep it positive, smart & human.

AI in action.
artificial intelligence isn’t on the way.
it’s at work today.
